

CATEGORY: Down Hole Survey DSIS Video Inspection Module

Engineered Tooling Solutions *FAST*

The TMT Down Hole Survey and Inspection System (DSIS) Video Inspection Module consists of a circular array of 12 high quality colour cameras.

The output from the cameras is displayed on a screen for real time viewing. Video from the selected camera can be recorded to DVD and used for later reporting.

Each of the cameras has 10x optical, 4x digital zoom and auto focus.

Zoom and focus can be adjusted manually if required. There are 12 high intensity LED lights which provide lighting for even the darkest situations.

This camera system is typically used for internal pile inspections. TMT can configure the Inspection Module to the customers' requirements.

Features:

- Compact Design
- Digital video output
- Rugged stainless steel casing
- High Quality Images
- 40x optical & digital zoom
- Focus Control
- Automatic or manual controls
- Complete 360° imagery
