## Imenco 3 & 4 Finger Jaws

Engineered Tooling Solutions *FAST*

The Imenco 3 and 4 finger front adapter for manipulators are made from high strength stainless steel and will make an exact fit to Schilling's Titan II, III, IV and Orion manipulators.

The 4 finger is perfect to use on T-bar grips and for other applications that require a steady grip. The front adapter assembly comes complete with actuation plate and piston and all necessary gaskets and will replace the standard parallel grip by loosening the 6 bolts. The changeover is done in less than half an hour. A majority of the ROV operators prefer and have installed Imenco's finger jaw on their manipulators. There are over 300 of Imenco jaws at work, with a number of operators in the North Sea and elsewhere.

### Features:

- Quick change
- Corrosion resistant
- Low cost
- Field proven

### Specifications:

- |                                |       |
|--------------------------------|-------|
| • Maximum opening between tips | 165mm |
| • Maximum Length mounted       | 200mm |
| • Diameter of Adapter          | 115mm |
| • Finger Width                 | 37mm  |
