40mm Wire Rope Cutter

Engineered Tooling Solutions **FAST**

The TMT 40mm Cutter Assembly allows the Webtool Wire Rope Cutter to be easily handled by the ROV manipulator.

The Wire Rope Cutter is a small, compact guillotine type cutter. It is a hydraulically driven unit, which is capable of cutting 38.1mm (1-1/2") 1960MPa grade Steel Wire. The TMT Cutter Assembly includes an adapted ROV handle that allows for Manipulator control as well as assists in locating the wire to the cutting position.

The 40mm Cutter requires 10,000psi (690bar) working pressure; therefore, a TMT intensifier is required to achieve the specified pressure.

TMT can configure to the customer requirements.

Features:

- Cost-effective
- Low maintenance
- ROV delivered & operated
- Field proven
- Internal relief valve
- Long blade life
- Aluminium construction

Specifications:
