

CATEGORY: **Completion** **MGC – Tronic Electronic Flying Lead**

Engineered Tooling Solutions *FAST*

The TMT Tronic Electronic Flying Lead (EFL) Marine Growth Cover (MGC) is an economical way of protecting subsea EFL receptacles from excessive marine growth build up.

The non-metallic plug is fitted with an O-ring seal to retain the MGC in the receptacle. The use of polyurethane gives compliance to the handle, allowing the MGC to be easily installed subsea. The TMT MGC isolates the receptacle from the marine environment. The physical presence of the plug inhibits the buildup of marine growth and helps to eliminate time consuming cleaning processes that could be required before re-entering the valve receptacle.

The TMT MGC can be customised to suit most applications. All TMT MGCs are designed to last over 40 years in the subsea environment.

Features:

- Easy to install and remove
- Corrosion resistant materials
- Titanium Pins
- Field proven
- Standard Receptacles include ISO 13628-8

Specifications:

	0012-0159	
• Dimensions		Ø49 x325Hmm
• Weight in Air		1.2kg
• Weight in Seawater		0.3kg
